

Leading the future of cyber security

A partnership for innovation and simplicity

In the modern digital workplace, applications and systems are accessible from any device whether they are hosted in the cloud or on premise. It's now even more important to ensure your organisation has the best possible security posture to protect you from the cyber threats of today and tomorrow.

SolarNet

SolarNet are a predominantly services-focussed company with a global partner network of technologies enabling businesses to identify threats, be prepared, understand their security position and stop them from becoming a reality.

We are a licensed technology partner, reseller and managed services provider of SecPoint solutions. With 50+ years combined experience in cyber security and by utilising the suite of SecPoint solutions on offer we are able to perform penetration testing and security assessments with ease.

SolarNet provide state-of-the-art accredited penetration testing of wired and wireless networks, applications and online platforms using the same tactics, techniques and procedures that cyber criminals use to gain access to your network and your data.

Undertaking a penetration test provides you with a comprehensive report that identifies what live vulnerabilities you have, a risk score of how likely they are to be exploited, who is likely to exploit them and how they are going to do it. But most importantly it provides the remediation steps enabling you to take the necessary measures to stop your cyber risks before they happen.

What are the benefits of performing Security Assessments and Penetration Testing with SolarNet?

- Gain important business insights into cyber security
- Identify and prioritise real-time risks
- Helps secure your IT from external threats
- Quickly identifies vulnerabilities and risks from cyber threats
- Obtain and maintain compliance
- Test cyber security incident response plans

Our knowledge and expertise extend to a variety of industries across both private and public sectors. We also offer a range of products and services specifically tailored for the Education sector.

SecPoint Penetrator™

SecPoint stands at the forefront of security solutions, consistently outpacing competitors in its market, and delivering exceptional, innovative IT security solutions to businesses with unparalleled ease.

The SecPoint® Penetrator™ is not just another vulnerability scanner; it's an advanced tool designed to simulate potential hacker attacks on systems, revealing vulnerabilities. By mimicking the techniques of online outlaws, cyber criminals, and other dark forces of the digital realm, it helps bolster security measures, preparing systems for any trick a hacker might pull from their arsenal.

Key features:

- Enhanced with 20 specialised vulnerability scanning profiles
- Customisable vulnerability reports with white-labelling options
- Automated vulnerability scanning with real-time notifications
- MSP (Managed Service Provider) ready functionality
- Advanced AI & machine learning for false positive reduction
- Comprehensive WiFi penetration testing with customisable reports
- Enhanced privacy controls

SolarNet are certified ISO 27001 - Information Security Management and ISO 9001 - Quality Management compliant, which epitomise our ability to consistently meet our customer's expectations and regulatory requirements.
